This demo file is intended to serve as a “starter file” for the conference papers produced under L^AT_EX.

Figure 1: You may include figures.

Figures could be included using the `graphicx` package, since the print version of abstract book will be black and white, format the figures accordingly. For references to figures use the format Fig. 1. Make sure to place encapsulated PostScript (EPS) files for figures in a directory at an order higher in hierarchy than the directory of `.tex` file, as shown here. Be sure to follow the Physical Review conventions for figure captions, labeling, etc. Equations can be typeset as in standard L^AT_EX, e.g.,

$$Ax = b. \tag{1}$$

As usual, references to equations use the format Eq. (1). Citations [1] are welcome; include them into the L^AT_EX file as demonstrated below. The style should match the one used in Physical Review.
